What medication is your pet currently taking? \_\_\_\_\_

Has your pet had any adverse reactions to anesthesia in the past? NO \_\_\_\_\_ YES \_\_\_\_\_

**Patients with fleas and/or ticks will be treated at owner's expense to ensure a flea/tick free environment**

## ADDITIONAL SERVICES

Please list any additional services your pet may need today. Example: bath, vaccines, nail trim etc

\_\_\_\_\_

## PRE-ANESTHETIC BLOOD TESTING - \$90.50

Like you, our greatest concern is the well-being of your pet. Some conditions including disorder of the liver, kidneys and blood are not detected unless blood testing is performed. Anesthetic agents are processed in the body by the liver and kidneys. Any disorder regarding these organs can increase your pet's anesthetic risks, including death. For this reason, all of our veterinarians highly recommend pre-anesthetic blood testing.

Please choose one of the following options: **(THIS IS REQUIRED OF ALL PATIENTS 5 YEARS AND OLDER FOR SURGICAL PROCEDURES)**

- YES – I WANT my pet to have Pre-Anesthetic blood testing at the cost of \$90.50
- NO – I DECLINE Pre-Anesthetic blood testing and I understand the risk in not testing for abnormalities
- Pre-Anesthetic blood testing is required due to the age of my pet or type of procedure being performed
- Pre-Anesthetic blood testing was already done on \_\_\_\_\_

**INTRAVENOUS CATHETER AND FLUID THERAPY - \$52.00**

We recommend every patient undergoing anesthesia have an IV catheter placed and be on fluids throughout the procedure. The benefits of having an IV catheter placed include: Maintaining blood pressure, keeping the patient hydrated, providing immediate access to the vein to deliver medication in the event of an emergency, and helping the patient expel the anesthetics from their body faster, allowing them to recover more quickly and smoothly.

Please choose one of the following options:

- YES – I WANT my pet to have an IV catheter at the cost of \$52.00
- NO – I understand the benefits but decline IV catheter and fluid therapy for my pet.

**PAIN MEDICATION (FOR AN ADDITIONAL CHARGE)**

Like us, pets feel pain. Therefore, we recommend pain medication for all our surgical patients and for our dental patients that have had extractions.

I understand pain medication is NOT optional for my pet's procedure if recommended by the doctor.

Owner initial \_\_\_\_\_

**MICROCHIP \$48.00**

Microchipping is a way of permanently identifying your pet. The chance of recovering a lost pet is significantly improved if they have a microchip. During anesthesia is a perfect time to microchip your pet.

- YES – I want my pet to receive a microchip
- NO – I understand the benefits of microchipping my pet, but decline today.
- My pet is already microchipped
